A global gathering of thought leaders, decision-makers and experts

GFIME is a unique platform that brings together the top brass from across policy, business, science and technology at the forefront of agriculture and food security of tomorrow.

What Is GFIME?

GFIME will serve as a showcase for the latest advances in research, innovation, development and policy in agriculture and food production in marginal environments, that is areas of the world most vulnerable to climate change, water scarcity and salinity.

It will bring together a select global audience of some 250 influential policymakers, decision-makers, scientists and experts who are at the forefront of reshaping agriculture and food production for tomorrow.

The forum will provide a 360-degree overview of opportunities and challenges in agriculture and food production around the world.
**Agenda Snapshot**

- Gala dinner
- Ministerial keynotes
- Onstage interviews
- First time presentation of Scientific Research
- Dedicated technical streams
- Panel discussions and debates
- Interactive Roundtables

**Who Will Speak and Attend?**

We have a top-notch speaker lineup from across the industry.

GFIME will attract around 250 influential policymakers and decision-makers, and world-leading scientists and experts who influence the direction and future of agriculture and food production.

**Why Now?**

Climate crisis, water scarcity and salinization are already affecting millions of people living in marginal environments.

While a growing world population needs more food and water, these problems are putting food security and nutrition of rural populations in developing countries at risk.

- We need effective policies to guide us into the future.
- We need strong agribusinesses that deliver.
- Most importantly, we need scientists and innovators who develop solutions that are market-ready and empower farmers and producers.

**How Will Attendees Benefit?**

GFIME is a platform designed for attendees to share, evaluate and learn. Participants will:

- **Gain insight into the scale and impact of threats** in marginal environments – as it relates to agriculture, food production and food security
- **Learn about successful strategies and case studies** already being used to adapt to harsh environments
- **Develop partnerships**, incubate projects and launch initiatives at the local, regional and international level
- **Learn how to devise climate-smart strategies** to lead their organization into the future
- **Access the latest technology** and research changing what is possible to achieve in harsh environments

**How Can You Register Your Interest?**

To reserve your place, please visit: [https://www.gfime.org](https://www.gfime.org)
